Djeidjah Mohamed Lemine

Data Engineer • AI Engineer • Full-Stack Developer

Ales, France | mohamedlemine.djeidjah@gmail.com | +33 7 59 18 98 67 |
<https://www.linkedin.com/in/mohamed-lemine-djeidjah-7774992a2/>

Profile

Dual-degree student at IMT Mines Alès (Software & AI), specialised in AI systems, data engineering and full-stack development with a strong DevOps/MLOps focus (CI/CD, containerisation, cloud, automation). Hands-on production experience: data pipelines, deployed ML models and APIs in real-world environments (healthcare, national systems, transport). Strong focus on **scalability, monitoring, reliability and security**. **Authorised to work in France — fully mobile**. Seeking a **1-year work-study contract (alternance) from September 2026** or a **final-year internship (PFE)**.

Education

Engineering Degree — Data Science & AI

IMT Mines Ales, France 2025–Present

Engineering Degree — CS, Networks & Telecom

ESP, Mauritania 2023–2025

BSc Computer Science, Networks & Telecom

ISCAE, Mauritania 2020–2023

Skills

AI & Machine Learning

PyTorch, TensorFlow, scikit-learn, CNN, NLP, LLM fine-tuning, OpenCV, evaluation metrics (F1, RMSE, recall)

Generative AI & RAG

LangChain, HuggingFace Transformers, ChromaDB, vector embeddings, FastAPI

Data Engineering & Analytics

Python (Pandas, NumPy), SQL, PostgreSQL, ETL pipelines, feature engineering

Development

React, Next.js, TypeScript, Flutter — Node.js, Express.js, Django, REST APIs

DevOps & Cloud

Docker, Kubernetes (basics), AWS (EC2, S3), CI/CD (GitHub Actions, GitLab CI), Infrastructure as Code (intro), Linux, Nginx, monitoring (logs, metrics)

Certifications

NVIDIA Fundamentals of Deep Learning
2025

NVIDIA LLM Evaluation & Customization
2025

DALF C1 — French 2024

TOEIC 900 — English B2 2025

Professional Experience

AI Engineer — Internship

Ciril Groupe, France

May – Aug. 2026

- Built a Natural Language to Query (NL-to-Query) chatbot for a financial reporting tool serving 3000+ clients across financial institutions.
- Worked closely with the Product Owner and development team in an agile workflow to define business requirements and design the LLM architecture.
- Integrated the full NLP pipeline (parsing, structured query generation, validation) into the existing production environment.

Data & Software Engineer — Contract

Centre Hospitalier de Bagnols-sur-Cèze, France

Nov. – Dec. 2025

- Built an HAS-compliant medical traceability platform (React / Next.js, TypeScript) for endoscope tracking.
- Automated OCR pipeline (Python, OpenCV) for medical document digitisation; Node.js REST APIs.
- PostgreSQL database (Supabase) with full audit history; Docker deployment in production.

Data & AI Engineer — Work-Study

Ibtikar Technologies, Nouakchott

Oct. 2024 – Jul. 2025

- National Taazour platform: REST APIs (Next.js / Express.js), React / TypeScript interfaces, containerised microservices architecture.
- Anti-spoofing liveness detection system: CNN PyTorch + OpenCV classifying real faces vs. attacks; F1, precision, recall evaluation.
- CI/CD pipelines (GitHub Actions), Docker deployments, strict TypeScript refactoring.

IT Support Intern

Kinross Tasiast, Mauritania

Aug. – Sept. 2024

- Network maintenance and technical support for 50+ users in an industrial environment.

Projects

Vision DL Engineer — Fire & Smoke Detection

Caplogy R&D

2025–2026

- Developed a high-performance computer vision model for fisheye security cameras in hospital settings (real-time fire & smoke detection).
- Trained and optimised deep learning models on specialised datasets; handled fisheye optical distortion correction.
- Embedded inference pipeline for edge deployment in resource-constrained environments.

ESP AI Chatbot — RAG Assistant

Personal project

2024

- Full RAG pipeline: LangChain + ChromaDB, Hugging Face embeddings, inference via FastAPI.
- Reduced manual queries by 70%; deployed to production on WordPress.

AlloCapp — Smart Transportation

Entrepreneurial project

2025

- Flutter app in production (1000+ users), real-time geolocation, JWT auth.
- React / TypeScript dashboard for live fleet tracking and operational KPI analytics.

ChronoESP — Academic Scheduling

Academic project

2024

- React interface + Google Calendar API; 60% reduction in scheduling overhead through automation.

Leadership

Founder, EliteTech RIM — SaaS transport startup (React + Python)

Product Architect, AlloCapp — Flutter app, 1000+ users

Lead, ESP Data Club — React redesign + community forum

Languages

French (C1) • English (B2)
